

What jobs can I do in GEOGRAPHY?

CARTOGRAPHER

Cartographers are involved in all features of developing and producing maps including scientific, technological and artistic maps. Cartographers are responsible for researching, collecting, storing, retrieving, evaluating and manipulating data. They are also accountable for designing maps and their accuracy. Their job involves liaising with information providers, clients and external contacts and accessing and using aerial photographs and satellite images.

ENVIRONMENTAL CONSULTANT

The role of an Environmental Consultant is to give advice on environmental matters. They provide expert assessment and advisory services for their clients on matters regarding the management of environmental concerns. Their responsibilities include working on areas such as the impacts of new developments on the environment, the control of pollution and noise, the effects of agriculture or recreation on plants and wildlife, the effect of climate change, waste management and recycling.

COMMERCIAL/RESIDENTIAL SURVEYOR

The role of a Commercial and Residential Surveyor is to advise their clients about the economic sustainability of the acquisition or lease of a property or land. A Commercial/Residential Surveyor is responsible for aspects of residential and commercial property in both the private and public sectors. They are involved in the management, purchase, sale or leasing, of land and property, as well as valuing and surveying property.

PLANNING & DEVELOPMENT SURVEYOR

The role of a Planning and Development Surveyor is to advise clients on all aspects of planning and development in order to help them make informed choices about investment opportunities. They work with their clients to increase the value of land by overseeing the development of property. These surveyors can work in the public or private sector and consider a range of complex economic, social and environmental factors when providing clients with information.
